

# IKT-tested: Adapter Ring Makes old Manholes HGV-proof

AdapTEC adapter ring creates a stable connection between an old manhole cone with no anti-displacement securement and new-pattern compensation rings.

**Sewer manholes** in roads have a lot to put up with. They are exposed not only to vertical, but also to **horizontal loads**. For this reason, newer types of manhole cover are secured against **lateral displacement**. However, older types of manhole, with no such security, are still predominantly found in roads. For these, there is now an **adapter ring** available that is claimed to prevent displacement. **IKT has tested** this new solution.
