rowth In Sewers: Causes And
Prevention

In times of climate change, trees in urban areas are becoming increasingly indispensable.

However, their roots share space with underground infrastructure and can grow into wastewater pipes and sewers, causing blockages.

Learn in our seminar how to:

- Prevent damage caused by tree roots on and in pipelines
- Gain an understanding of the interaction between pipes and roots
- Overview of the research project conducted by IKT

A **free to attend** one-hour webinar, to be repeated on five

dates.

Check out the different seminar **dates and times** to suit your time zone:
